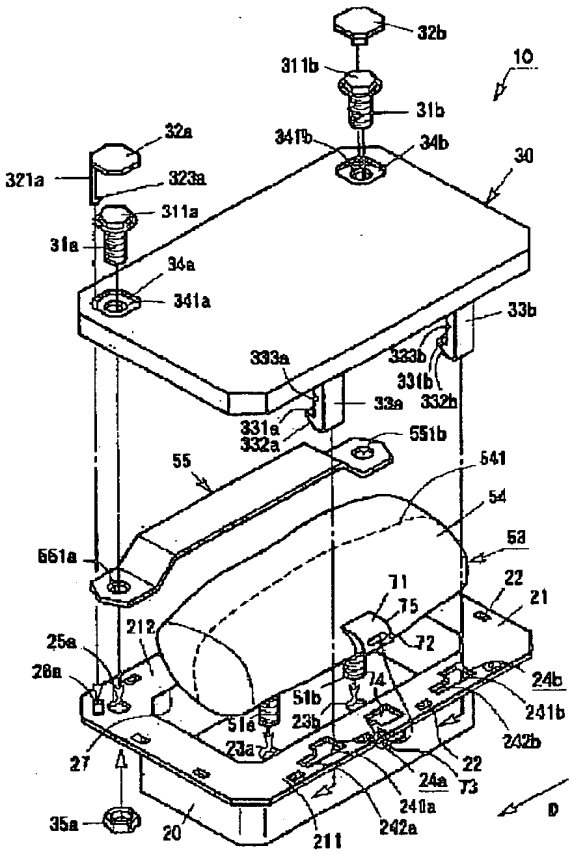
INT.CL. : B60R 21/22 B60R 21/20

TITLE : AIRBAG DEVICE



ABSTRACT : PROBLEM TO BE SOLVED: To facilitate conveyance of a case and assembly to a vehicle by preventing an airbag from being detached or dropping when the case of the airbag device is assembled on a vehicle body side.

SOLUTION: An airbag 53 which stores an inflator is stored in a case 20. An opening plate 21 which protrudes outward is formed on the case 20. An engaging piece 71 which can be separated from a lap cloth at the front end and protrude outwards along the opening plate 21 is formed at the lap cloth 54. A protruding piece 73 is formed at the back surface of the opening plate 21. The airbag 53 is stored in the case 20, an engaging piece 71 extends to the outside of the case 20 along the opening plate 21 and is turned to the back surface of the opening plate 21, so that the locking groove 72 is locked to the protruding piece 73. The locking mechanism consisting of the engaging piece 71 and the protruding piece 73 prevents the airbag 53 from dropping or being detached.
